

Overfitting pretraitements : C20.0

$R^2_p = -0.246$
 $RMSEP = 0.096$
 $RPD = 0.911$
 $n_{ech} = 30$

The scatter plot displays the relationship between predicted and observed values. The x-axis is labeled 'Valeurs predites' and ranges from 0.1 to 0.5. The y-axis is labeled 'Valeurs observees' and ranges from 0.1 to 0.5. A red dashed line represents the ideal 1:1 relationship. A solid blue line represents the linear regression, which has a negative slope. The data points are represented by open circles. The plot includes several outliers, particularly at higher predicted values where the observed values are significantly lower.

R2p = -0.246
RMSEp = 0.096
RPD = 0.911
n_ech = 30
