

A scatter plot comparing the Root Mean Square Error (RMSE) and the Cross-Validated Root Mean Square Error (RMSEcv) for two datasets: 'pretraitements testes' and 'Champion Absolu'. The x-axis is labeled 'RMSEcv' and ranges from 0 to 450. The y-axis is labeled 'RMSE' and ranges from 0 to 450. A dashed red line represents the identity line $y = x$. The 'pretraitements testes' data points are represented by open circles, and the 'Champion Absolu' data points are represented by filled red circles. The 'Champion Absolu' points are clustered near the origin, while the 'pretraitements testes' points are more widely distributed, with a notable cluster of points where RMSE is significantly higher than RMSEcv (around RMSEcv = 400, RMSE = 450).
